

Azure App Services Deploy Exercise

Part 1: Create Web API with EF Core

Part 2: Create Azure SQL Database

Home > Azure SQL | SQL databases

Create SQL Database

Microsoft

Project details

Select the subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Subscription * ⓘ Azure for Students ✓

Resource group * ⓘ (New) rg-demo ✓ [Create new](#)

Database details

Enter required settings for this database, including picking a logical server and configuring the compute and storage resources

Database name * azuredb ✓

Server * ⓘ (new) sqlserver9965 (Central India) ✓ [Create new](#)

Compute + storage * ⓘ **General Purpose - Serverless**
Standard-series (Gen5), 2 vCores, 32 GB storage, zone redundant disabled
[Configure database](#)

Max storage selected (in GB) 0.00 x 41.6

First 32 GB storage free

First 100,000 vCore seconds free

Overage billing¹ Disabled

ESTIMATED STORAGE COST / MONTH 0.00 USD

COMPUTE COST / VCORE SECOND² 0.000000 USD

¹ There will be no charges for usage within the free limits. The database will be paused automatically when the free limits are reached.

² Serverless databases are billed in vCore seconds based on a combination of CPU and memory utilization. [Learn more about serverless billing](#)

Create SQL Database Server

Microsoft

Server details

Enter required settings for this server, including providing a name and location. This server will be created in the same subscription and resource group as your database.

Server name *

sqlserver9965

.database.windows.net

Location *

(Asia Pacific) Central India

Authentication

Info

Azure Active Directory (Azure AD) is now Microsoft Entra ID. [Learn more](#)

Select your preferred authentication methods for accessing this server. We recommend using only Microsoft Entra authentication [Learn more](#) or using an existing Microsoft Entra user, group, or application as Microsoft Entra admin [Learn more](#)

Authentication method

☐ Use Microsoft Entra-only authentication

☐ Use both SQL and Microsoft Entra authentication

☒ Use SQL authentication

OK

Part 7: CI/CD (Optional but Recommended)

The screenshot shows the Microsoft Azure portal interface. At the top, the header includes the Microsoft Azure logo, a search bar, and a Copilot button. The breadcrumb trail indicates the path: Home > Microsoft.Web-WebApp-Portal-91fb5318-82b0 | Overview > StudentManagementMVC. The main heading is "StudentManagementMVC | Deployment Center" with a star icon and a menu icon. On the left, a sidebar contains a search bar and a list of navigation items: Tags, Diagnose and solve problems, Microsoft Defender for Cloud, Events (preview), Log stream, Resource visualizer, Deployment, Deployment slots, and Deployment Center (which is highlighted). The Deployment Center section is expanded, showing sub-items: Settings, Performance, App Service plan, Development Tools, and API. The main content area is titled "Settings" and includes tabs for "Logs" and "FTPS Credentials". At the top of the settings area are buttons for "Save", "Discard", "Refresh", "Browse", "Sync", and "Send us your feedback". A blue informational banner states: "You are now in the production slot, which is not recommended for setting up CI/CD. [Learn more](#)". Below this, a section titled "Deploy and build code from your preferred source and build provider. [Learn more](#)" contains a "Source" dropdown menu set to "GitHub". Underneath, it says "Building with GitHub Actions" with a "Change provider" link. A "GitHub" section follows, explaining that App Service will place a GitHub Actions workflow in the chosen repository. It notes that if an organization or repository cannot be found, additional permissions may be needed. Below this, the "Signed in as" section shows the user "GurnoorOberoi" with a "Change account" link. Finally, the "Organization" dropdown menu is set to "GurnoorOberoi".
